## Technology Lift & Shift Services

Whether a company grows or shrinks, merges, is acquired or acquires another company there is the potential for a company to change its physical location. Commercial real-estate agencies provide the service of locating the appropriate property for the company. However, finding a location to move to, hiring a company to move the furniture, and hiring a company to modify the layout of the office is also very important. The real-estate agency, their affiliates or the building manager offer many of these services.

So what is left?? What about the company's technology? Who moves that? Whom do they have on staff that can make sure the servers are moved properly and setup properly at the new location? What about the computers? Phone lines and phones? Internet access? These items are crucial for a business yet they are overlooked or not handled properly in many moves.

**Technology Lift & Shift** offers services that can cover:

- 1) Acquiring the correct circuits for the phone system, Internet, Wide Area Network and others
- 2) Ensuring that existing wiring will suffice for power and connectivity or install the appropriate wiring
- 3) Relocating data equipment from the old location to the new location safely and securely
- 4) Configuring the new computer room, main distribution frame, or server room
- 5) Cleaning all servers of dust
- 6) Ensuring proper working status of all servers
- 7) Confirming connectivity of workstations to the network and to the internet
- 8) Relocating printers and ensure connectivity
- 9) Providing engineering services, if required, to create an entirely new infrastructure
- 10) Removing of obsolete equipment
- 11) Data security, disk destruction with certification

From the Desktop to the Cloud - let us help make your move a success. With a proven track record in moving small and medium sized companies, network design and engineering, wiring and a knowledge of telephony circuits and providers, we can help get your company back up and running with as short an interruption as possible. We work with you before the move to ensure the new location is ready. We also work with the furniture company to make sure that the wiring for cubicles, conference rooms, etc. is in place for the phones and the computers. We also install wireless networks!
